

Windows

Requirements and analysis model

Product description

A platform designed to support the operation of a window manufacturing, sales and installation company, namely the process of interaction with the customer, designed to reduce the time and material losses of the company and to increase customer interest in it. The latter is intended to be achieved by including in the AR system technology for measuring the approximate size of windows, which will allow users to calculate the cost of a window before ordering and to select the best option for them.

Personas

Konstantin

35 y.o., owns a flat in Moscow region and lives in it.

Decided to renovate his flat and replace windows as well. Prefers to talk on the phone as little as possible. Price is important for him, so it preferable to see it before ordering.

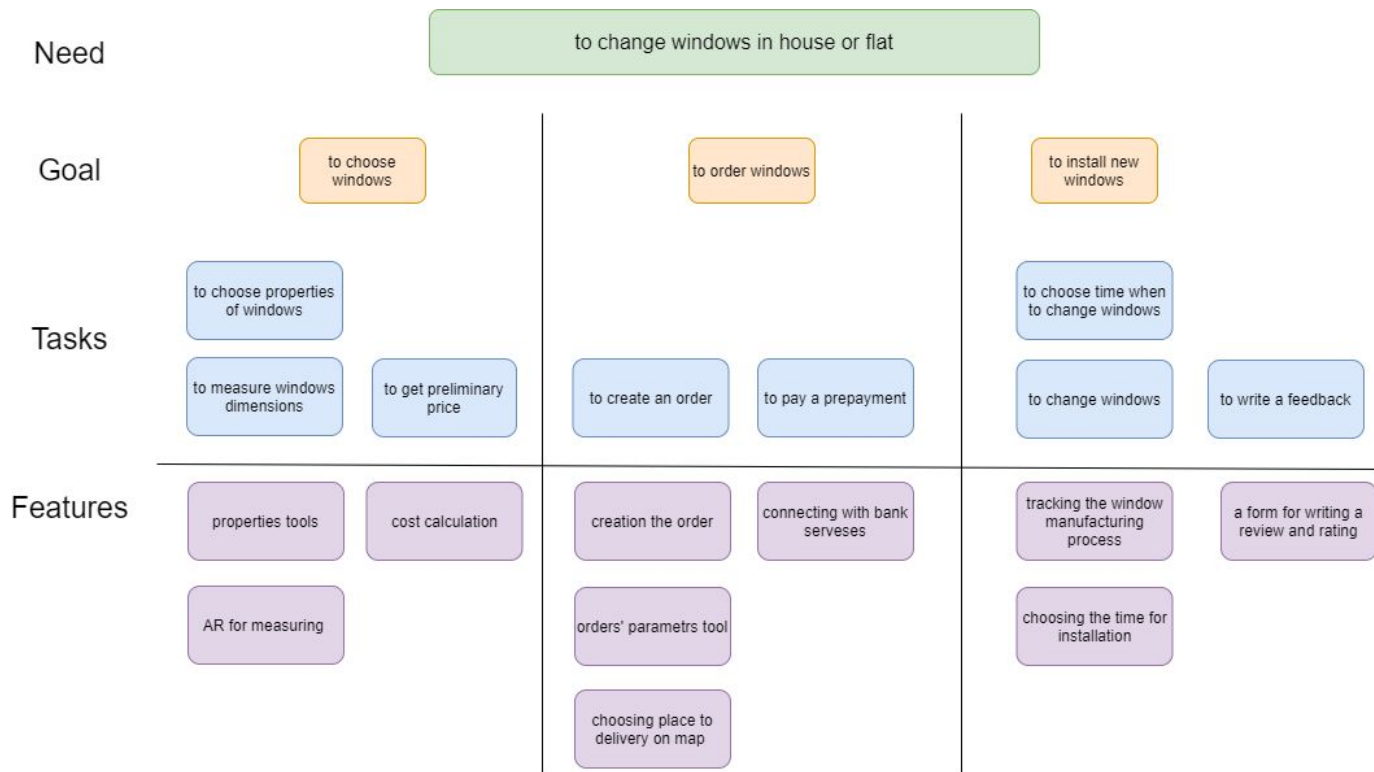

Alexander

30 y.o., works for an intermediary window company located in Moscow region.

Mostly uses his own car to get to customers. Wants to get rid of the need to go to the factory to hand over an order because of the traffics.

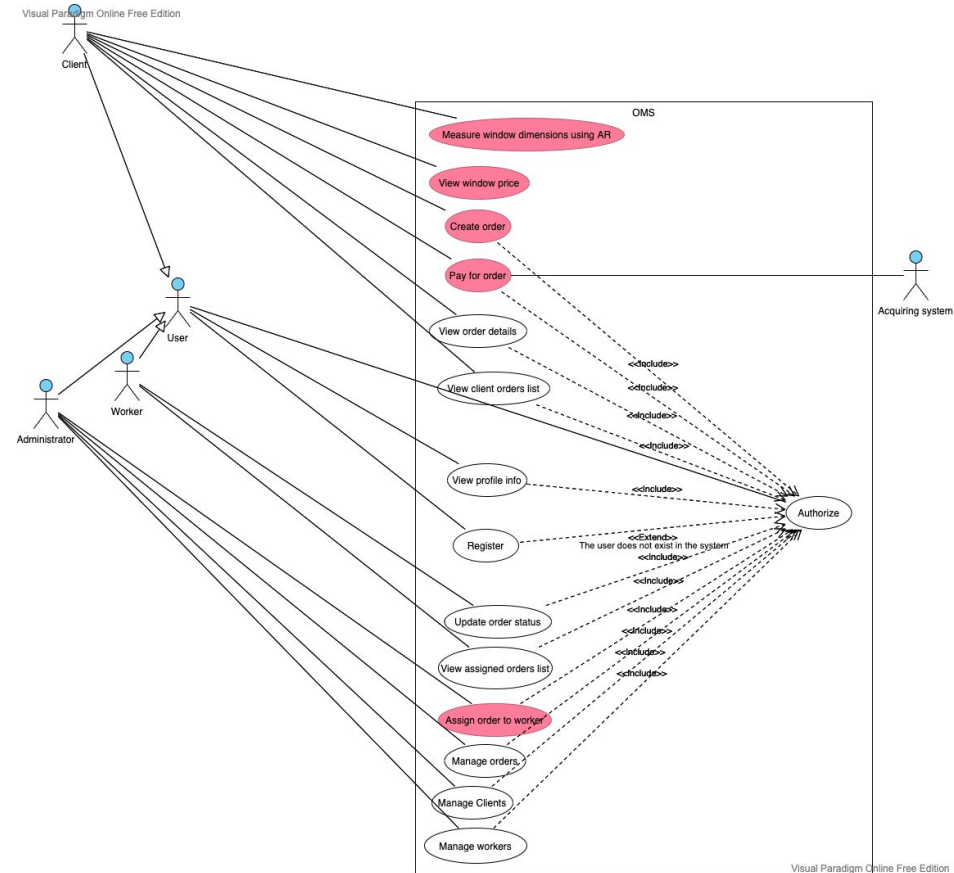

Story map

* User stories you can find in Notion page:

Interaction analysis

Use case	Actors	Class candidates
Measure window dimensions using AR	Client	Client, window
View window price	Client	Client, window
Create order	Client	Client, window, order
Pay for order	Client, Acquiring system	Client, order, acquiring system
Assign order to worker	Administrator	Administrator, order, worker

* Cards made in process of interaction analysis you can find in Notion page:
